Comments								
Good points	<ul style="list-style-type: none"> Reasonably straightforward to assemble. 	<ul style="list-style-type: none"> Reasonably straightforward to assemble. The zippered entry/exit on the enclosure is very easy to use. 	<ul style="list-style-type: none"> The trampoline passed all structural tests: the frame and enclosure are strong and durable . 	<ul style="list-style-type: none"> Reasonably straightforward to assemble. 	<ul style="list-style-type: none"> Reasonably straightforward to assemble (but see the bad points for further comments on this). 	<ul style="list-style-type: none"> Reasonably straightforward to assemble. 	<ul style="list-style-type: none"> Overall, the best trampoline on test. Passes all structural, impact and safety tests: the frame and enclosure are strong and durable and the trampoline gives good protection from any impacts against the frame, mat, and enclosure. There are no significant entrapment hazards on the trampoline. The supplied instructions are excellent; they are clear and very easy to follow. The entry/exit on the enclosure is very easy to use. 	<ul style="list-style-type: none"> Reasonably straightforward to assemble. The trampoline passed all impact tests: the trampoline gives good protection from any impacts against the frame, mat, and enclosure.

								
Test results	Action 10 foot S001964	Jumpflex Classic 100	Kahuna Classic 10 foot Orange	Kmart 10 foot with enclosure 42497134	Lifespan Hyperjump Plus	Plum Space Zone 10 foot	Springfree Trampoline Medium Round R79	Vuly Thunder Medium
Bad points	<ul style="list-style-type: none"> Fails safety tests, with several major safety hazards: the trampoline's frame, mat and enclosure failed various tests for structural integrity and impacts, and for hazards including head entrapment and pinching/crushing/shearing hazards. Six bolts were missing from the supplied parts, which was very inconvenient for assembly. Replacement bolts of the same size were sourced and used instead. It's possible the bolts were lost in transit or were removed by the retailer to supply another customer. Product labels and safety warnings are not as per standard requirements. The manufacturer provided certification that this trampoline has passed the Australian standard in another lab; it's possible that samples vary and that not all samples will pass. 	<ul style="list-style-type: none"> Fails safety tests, with several major safety hazards: the trampoline's frame, mat and enclosure fail various tests for structural integrity and impacts. Gaps between the springs present a head entrapment hazard to a child playing under and around the trampoline. We view these as less serious than a head entrapment hazard inside the enclosure and mat area, as hazards on the exterior of the trampoline are not likely to be encountered at force and a supervising adult can intervene more easily. The springs also present a pinching hazard. Product labels and safety warnings are not as per standard requirements. 	<ul style="list-style-type: none"> Fails safety tests, with some major safety hazards: the trampoline's padding was damaged (torn) during impact tests; the enclosure isn't tall enough; and the trampoline has safety hazards including head entrapment between the springs and between the mat and the enclosure net, and pinching/crushing/shearing hazards. Product labels and safety warnings are not as per standard requirements. No printed assembly or safety instructions are supplied at all; instead you are directed to a website. This made assembly more difficult than it ought to be (even though the parts go together relatively easily). You have to print out the instructions yourself, or work from reading a screen, which is less convenient and may lead to assembly errors and misuse of the trampoline. 	<ul style="list-style-type: none"> Fails safety tests, with several major safety hazards: the trampoline's frame, mat and enclosure fail various tests for structural integrity and impacts. Gaps between the springs present a head entrapment hazard to a child playing under and around the trampoline. We view these as less serious than a head entrapment hazard inside the enclosure and mat area, as hazards on the exterior of the trampoline are not likely to be encountered at force and a supervising adult can intervene more easily. The springs also present a pinching hazard. Product labels and safety warnings are not as per standard requirements. 	<ul style="list-style-type: none"> Fails safety tests, with several major safety hazards: the trampoline's frame, mat and enclosure fail various tests for structural integrity and impacts, and for hazards including head entrapment and pinching/crushing/shearing hazards. Product labels and safety warnings are not as per standard requirements. While the parts go together reasonably easily during assembly, the trampoline comes in just two large heavy boxes which take two people to handle. Most other trampolines come in three or more boxes, which distributes the weight and makes handling easier. 	<ul style="list-style-type: none"> Fails safety tests, with several major safety hazards: the trampoline's frame, mat and enclosure failed various tests for structural integrity and impacts, and for hazards including head entrapment and pinching/crushing/shearing hazards. Product labels and safety warnings are not as per standard requirements. 	<ul style="list-style-type: none"> The spring rods are comparatively difficult to fit to the frame; this makes the overall assembly a bit harder than for most other models. Make sure you've got other people on hand to assist; alternatively, it could be worth having the trampoline professionally assembled. Comparatively expensive. 	<ul style="list-style-type: none"> Fails safety tests: the trampoline's frame fails structural integrity tests (a leaf spring deformed and dislodged under stress testing). Gaps between the leaf springs present a head entrapment hazard to a child playing under and around the trampoline. We view these as less serious than a head entrapment hazard inside the enclosure and mat area, as hazards on the exterior of the trampoline are not likely to be encountered at force and a supervising adult can intervene more easily. There are also pinching hazards between the leaf springs and frame ring. Product labels and safety warnings are not as per standard requirements. The manufacturer disputed our findings as they have tested this model to the Australian standard and found it passed. An accessory skirt is available at extra cost to cover the leaf springs and help prevent any entrapment and pinching hazards in that area. Comparatively expensive.
